

Inflated Scalability & Margin Cannibalization

Structural Friction Analysis: When selling more destroys the ability to operate.

01. INITIAL CONDITION (THE ILLUSION)

B2B logistics company billed **USD 45,000/month** with 12 stable accounts. Following a sales round, 14 new accounts were added, raising nominal revenue to **USD 95,000/month (+111%)** without adjusting the installed capacity.

02. METRICS IN SYMPTOM (THE ESCAPE)

32% → 9%

OPERATING MARGIN

+340%

COST PER ERROR

13 hrs/day

COORDINATOR LOAD

40% Quarter.

JUNIOR ROTATION

03. TRADITIONAL CONDITIONING

Leadership assumes that the problem is *"lack of team commitment"* either *"operational disorder"*. The typical response is to push for more sales to compensate for the margin, demand more reports, or install monitoring software that adds bureaucracy without fixing the flow.

04. STRUCTURAL EMOTIONAL LOAD ("FOK, YES I AM")

- **The Human Mattress:** Two senior coordinators are destroying their health by working 13 hours a day doing manual containment so that the founder doesn't notice the collapse.
- **Self-censorship due to fear:** The team hides the real fires because they fear being fired if they admit that the system can't handle any more.
- **Founder's Disconnection:** It demands daily reports by email that take it 2 hours to review, operating under blind microcontrollers fed by doctored data.

"The business seems prosperous on the outside, but on the inside, people's health is the only thing holding it all together."

05. FRICTION NAMED (FRICCIÓN IDENTIFICADA)

- **Friction A:** Patching up a lack of architecture with unsustainable human wear and tear.
- **Friction B:** Vicious commercial incentive (commission for signed contract, 0 responsibility for delivery or margin).
- **Friction C:** Directive data blindness produced by fear dynamics.

06. LEVERAGE NAMED (STRUCTURAL LEVERAGE POINTS)

LEVERAGE 1: Commercial Realignment

Link the second fraction of *success fee* commercial to successful implementation and margin stability, forcing tactical empathy between Sales and Operations.

LEVERAGE 2: Governance & Load Brake

Establish an explicit transparency pact ("no fudging of data") and actively pause/renege the most friction-ridden accounts to recover installed capacity.

Architectural note: This document is strictly limited to naming structural friction and locating its leverage points.

Execution and deployment are entirely the responsibility of the system leadership.
